UPCOMMING EVENTS

19 July

.NET 5, 6, and 7 for busy developers

Many developers are still using .NET Core 3.1, even though it reached EOL in 2022.
We now have .NET 5, .NET 6, and .NET 7 available, each with some improvements and new functionalities.
In this session, we're going to explore the most important things a .NET developer should know about the newest versions of the framework.

22 July

.NET IoT and AI hackdays: Session 3

Session 3 will start where we left off last time. It will still be a very introductory and basic session and we will build on the knowledge gained at each hack session. Don't worry if you missed the session last time, we will recap and have a refresher before building on our knowledge.

12 August

Data Saturday Cape Town

Data Saturday is a free community-focused event dedicated to educating and engaging members of the local technical and business community. Data Saturday draws upon the expertise of local and international data professionals, developers and solutions architects and business users who come together to share their real-world experiences, lessons learned, best practices, and general knowledge with other like-minded individuals.
